

PUZZLE TABLE
CHILDREN'S FURNITURE

BCI

With simplistic curvilinear shapes, BCI has created a furniture system that provides children the opportunity to explore freely. The furniture was designed and developed from an active element concept. Children are persuaded to participate by the colorful furniture and the many inviting rearrangements of the line for a multitude of activities. Both the shape of the tables and stools are puzzle pieces that can be combined and changed in an instant. The wood components are bent birch plywood. The table tops and stool seats are significantly reinforced with steel plates connected with bolts into threaded inserts embedded into the plywood.
